Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Michaud, et al. (US Patent No. 6,003,018). Michaud discloses a portfolio optimization by means of resampled efficient frontiers wherein the variance of a portfolio may be stated as the sum of the weighted variances of the individual assets and such portfolio optimization is a statistical procedure, based on estimated returns subject to a statistical variance. Michaud further discloses that since the input data used for mean-value (MV) optimization are of a statistical nature (i.e., characterized by means with associated variances and other statistical measures), the input data may be iteratively resampled to generate a set of statistically equivalent portfolios that may correspond to a minimum variance.

However, regarding independent claims 17 and 37, Michaud taken either individually or in combination with the other prior art of record fails to teach or suggest a method, as claimed, including an iterative resampling that includes removing and reinstating instruments from and to the universe when calculating the variance of the universe during optimization, wherein the index is formed when the remaining dv01 of the universe is a predetermined percentage of the original dv01 of the universe.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The following prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Yahil, et al. (US Patent No. 7,328,182) discloses a system and method for prediction of behavior in financial systems.
- Hunter, et al. (US Patent Application Publication No. 2003/0046212) discloses resource allocation techniques.
- Goldfarb, et al. (US Patent Application Publication No. 2002/0123953) discloses systems and methods for providing robust investment portfolios.
- Browne, et al. (US Patent No. 7,228,290) discloses a method and system for simulating risk factors in parametric models using risk neutral historical bootstrapping.
- Cooper, et al. (US Patent No. 7,236,953) discloses deriving a probability distribution of a value of an asset at a future time.
- Sale (US Patent No. 7,085,690) discloses unsupervised machine learning-based mathematical model selection.
